

PEC PULSE - C SERIES FUEL DISPENSER

Powered by modularity, driven by smart electronics and Data Centre for remote operational views, the PEC PULSE range is a perfect match for your forecourt.

PEC Fuel Systems recognises that today's market requires a modern fuel dispensing range that is streamlined and yet extremely flexible to suit any forecourt.

PEC DATA CENTRE BRINGS VISION TO EVERY DISPENSER

Changing the game is not about taking risks, it's about taking on technology from a reliable, leading industry player, that advances the industry, has positive business benefits and is a platform for the future.

All PULSE products are, or can be Data Centre enabled. Securely connecting them to the Data Centre via the internet, allows vision on your phone, tablet or office PC.

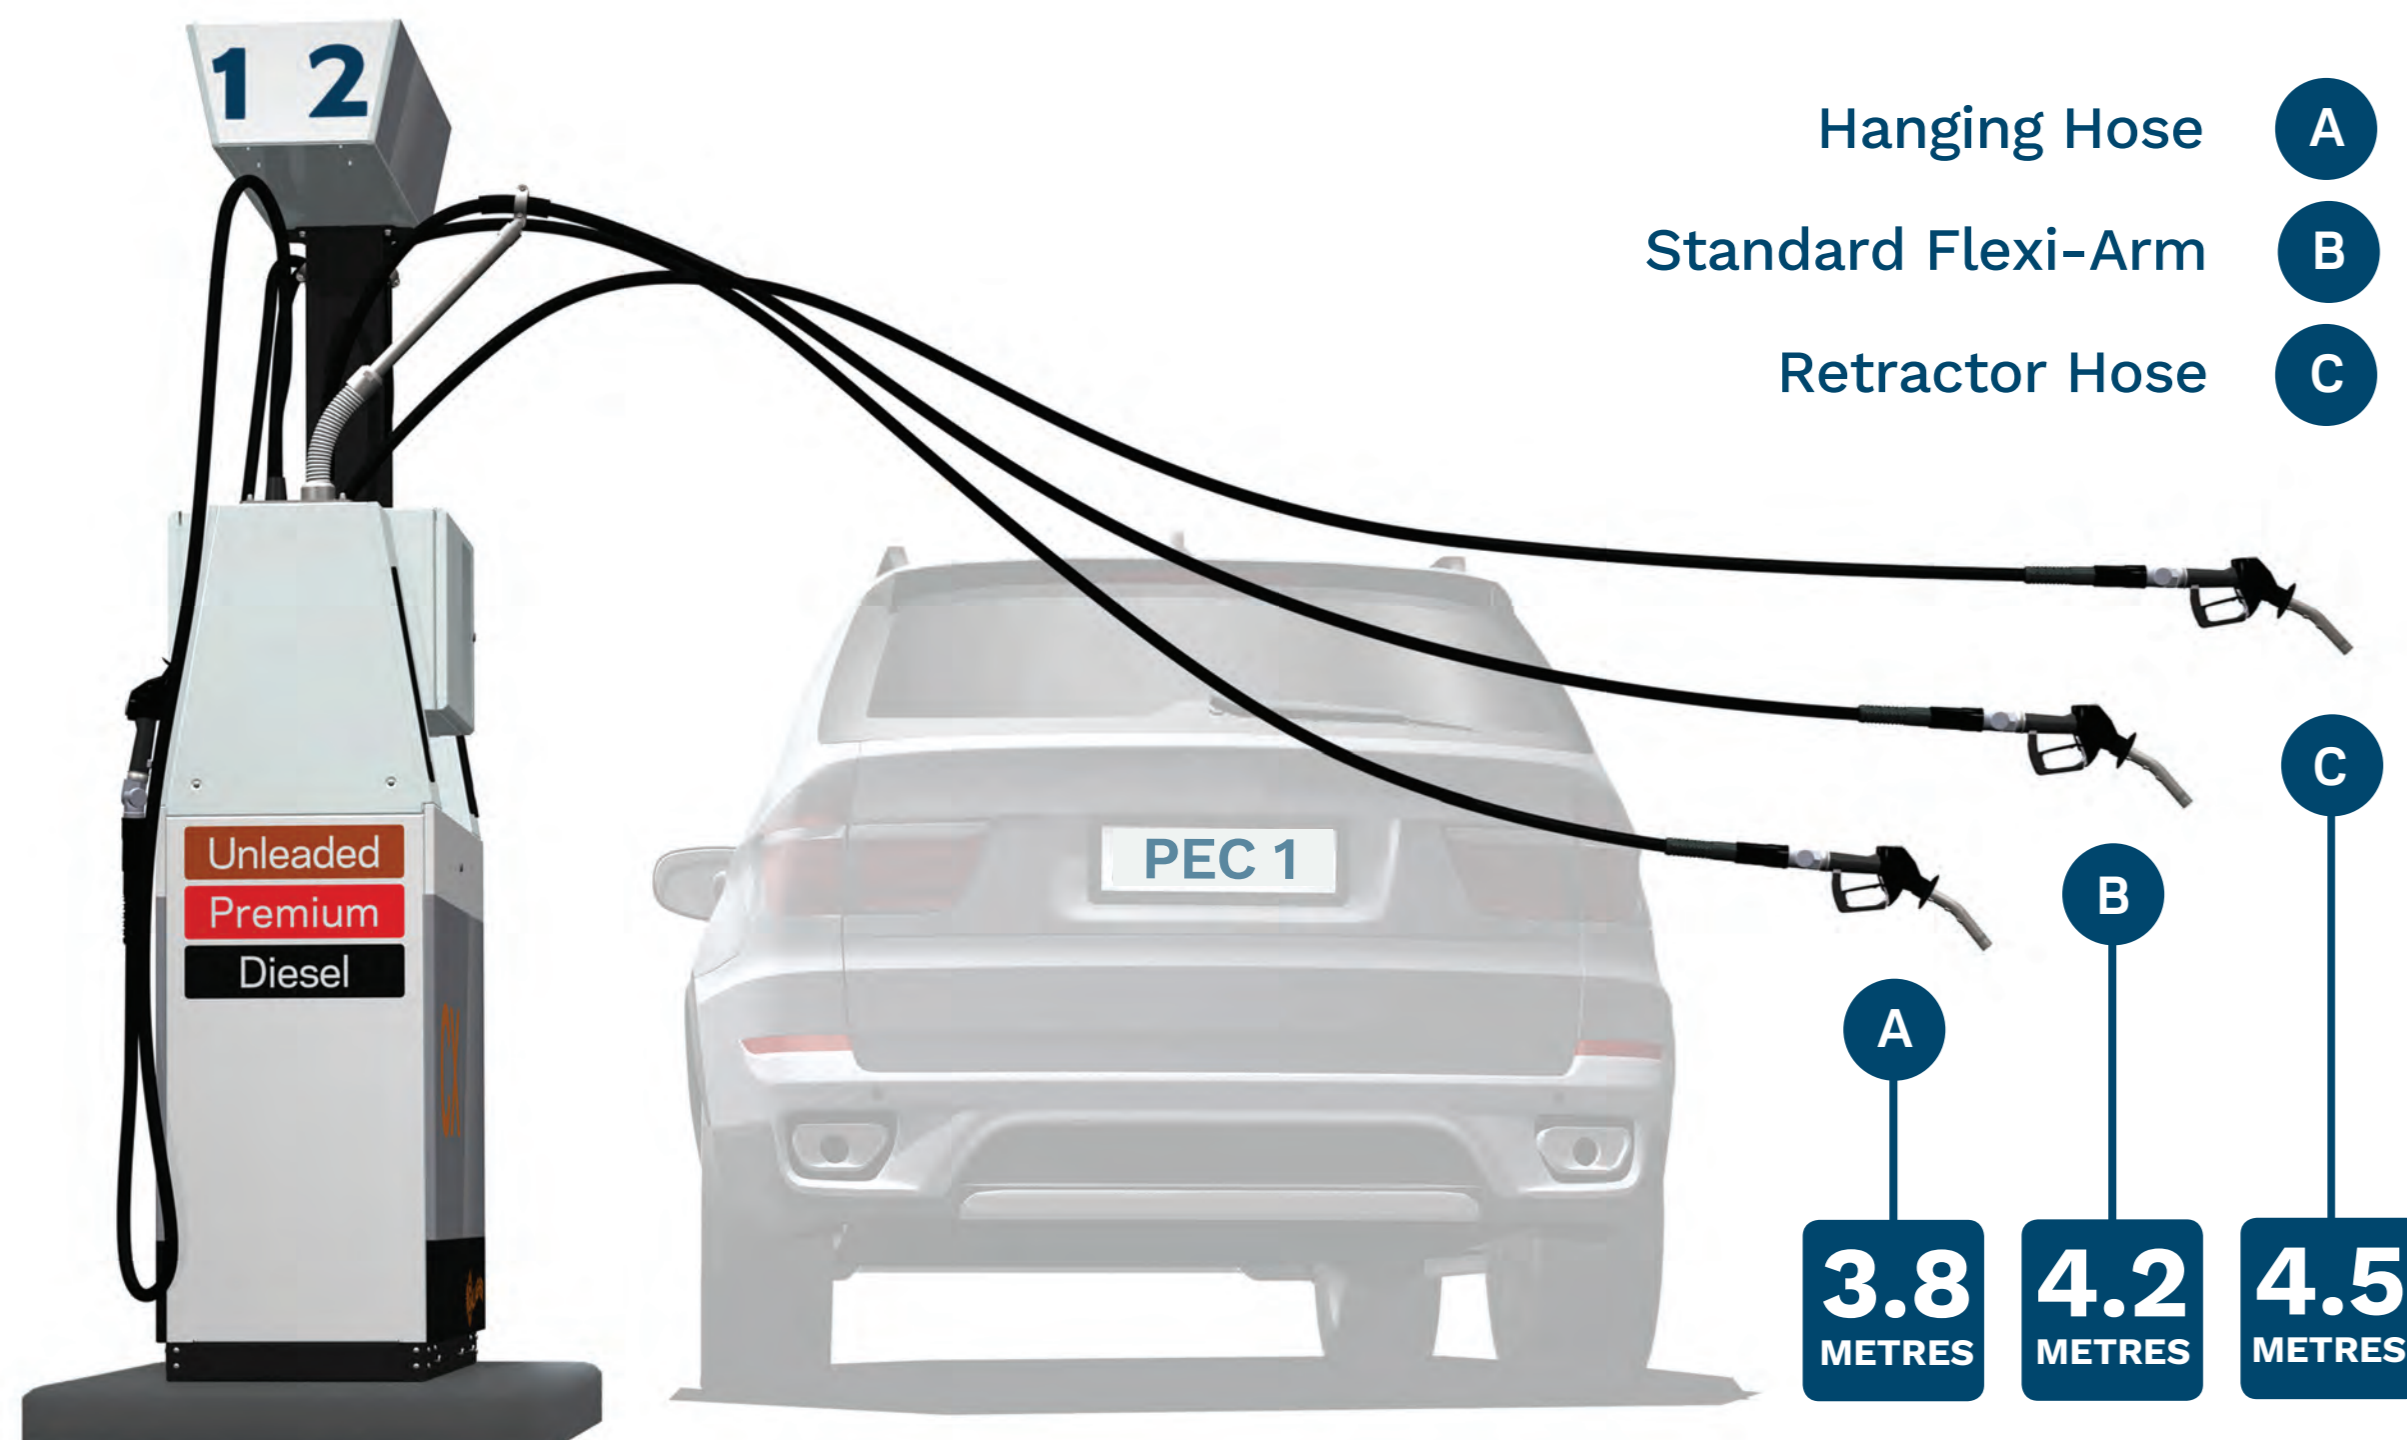

Any new site build or site enhancements must consider the Data Centre first as a through life management plan for dispensers.

- Every pump/hose has 24/7 intelligent sensing with dynamic status and email alerts
- Every dispenser can be accessed remotely – reducing site visits in multiple ways
- Service contracts can now be built around Data Centre on fact based 'site-wide' servicing

MULTIPLE FEATURES MAKING THE PEC PULSE C SERIES A LEADER IN ITS FIELD

- 1 Pressure fed, suction and mixed models available.
- 2 Highly accurate Tatsuno meter with 3 year warranty.
- 3 5 year corrosion protection warranty on all exterior panels.
- 4 Large User Interface provides space for brand, advert, OPT or Media.
- 5 Fast flow diesel with the press of a button, from any position. Options for standard to boosted or high to ultra (120+ lpm) flow rate levels.
- 6 Option of grade confirmation latch or the additional flap, to deter misfuelling.
- 7 Options for the integration of Vapour Recovery (VR2), LPG and +Blue.
- 8 Option of a retraction or a fixed hose system.
- 9 Spreader can be branded and/or illuminated. Reduced spreader for smaller profile with existing canopy.

- A Hanging Hose
- B Standard Flexi-Arm
- C Retractor Hose

3.8 METRES
4.2 METRES
4.5 METRES

HOSE OPTIONS

Better access over larger vehicles

MANY OPTIONS IN ONE SMALL SPACE

The C shape was designed for optimal vision and smallest footprint across the forecourt. It differs from the L Series in that hoses are contained within the footprint of the hydraulic cabinet without the need for a separate hose column. The CX/CS are more easily bolted down and fitted to existing fuel lines and sumps in retrofit situations.

Within the C Series, CS Q models provide several unique and practical features:

- Lane orientated hoses for operation on either side of the island
- Slim columns to make all Enhanced UI options available
- Extended Flexi-Arm for extra long hose reach (5.2m) in truck areas

Customer interfacing options are modular and like the L Series continue within the CX, CS and CS Q Models: Smaller Fuelling Interface (FUI) and the larger Enhanced UI or one of its variants: Advert UI, Media UI, Dedicated Grade UI or Payment UI.
